FOR IMMEDIATE RELEASE

Smart, Eco-Friendly Aqueous Parts Washer

The environmentally friendly PH822-A uses heated aqueous fluids to clean parts with a minimal ecological footprint. Seventy years of experience helped in the design of a system that will meet the demands and needs of the parts cleaning industry.

For stability, the PH822-A has 4 heavy-duty legs. The sink itself is a large 36" x 22" with 10" soak depth. Redesigned controls provide status information to the operator.

Standard features include a stainless removable work shelf, heater with adjustable thermostat, 300 gph pump, GFCI, low liquid level shutoff, flo-thru work brush, stay-put flexible flush hose, and triple-action filtration. Sink bottom has ridges, allowing cleaning fluid to circulate under soaking dirty parts, as well as keeping parts above any sludge on the bottom.

Continuing the green focus, Graymills supplies Aquatene aqueous cleaning fluids that meet the stringent South Coast Air Quality Management District Clean Air requirements.

To learn more about the PH822-A, contact Graymills at Phone: 773-248-6825; Fax: 773-477-8673; Email: info@graymills.com; Web: www.graymills.com
