

Heavy Duty Kit Featuring Compact Leak Detection Flashlight

Westbury, New York — Tracer Products has introduced a special leak detection kit that makes it easy for heavy duty technicians to find *all* air conditioning and fluid leaks the *first* time — and avoid costly comebacks.

The **TP-8647HD** kit features the **OPTIMAX Jr™**, a cordless, blue light LED leak detection flashlight with mega power that reveals even the smallest leaks. It is ideal for leak checking hard-to-reach spots that are inaccessible to larger lamps. This ultra-compact leak detector has a 100,000-hour service life and is powered by three AA batteries, which are included.

Also included in the kit are an **EZ-Ject™** A/C dye injector with hose/coupler and adapter/purge fitting, two EZ-Ject *universal* A/C dye cartridges with *co-solvent free* Fluoro-Lite® dye — each ½ oz cartridge can service up to 14 vehicles — an 8 oz bottle of Dye-Lite® All-In-One™ concentrated oil dye that services up to 16 vehicles, an 8 oz bottle of Dye-Lite coolant dye that services up to 8 vehicles, and fluorescence-enhancing glasses. Everything is stored in a convenient, sturdy carrying case. All Tracerline® universal/POE A/C dyes have been laboratory tested and proven safe for use in hybrid vehicles.

For more information about the **TP-8647HD** heavy-duty kit, call toll-free 1-800-641-1133. Outside the United States and Canada, call 516-333-1254. Website at www.tracerline.com.
